AUTHORS BIODATA

Adiat Ibironke Arogundale completed her Ph.D. from Universiti Teknologi PETRONAS, and the study was focused on intumescent fire retardant coating. Presently, she is working as an assistant professor in Nigeria.

Amir Azam Khan completed his Ph.D. from France. Professor Amir has more than 20 years of experience in research and teaching. Presently, he is attached to the National University of Sciences and Technology, Islamabad, Pakistan.

Azmi Mohd Shariff is a professor in chemical engineering at Universiti Teknologi PETRONAS, Malaysia, with more than 20 years of academic experience. Professor Azmi was announced as Top Research Scientist Malaysia (TRSM 2015) and Research Fellow (2017) awarded by the Academy of Science Malaysia, MOSTI. Professor Azmi is currently the Director of the Institute of Contaminant Management for Oil and Gas, with six research centres under his portfolio.

Eugenio Onate is a Professor of Structural Mechanics at the School of Civil Engineering, Technical University of Catalonia. His research career centres around numerical methods and their application to engineering. The results of his research are then transferred to the industrial sector. His research achievements in numerical methods and software for analysing structures, fluid dynamics, and industrial manufacturing processes are internationally recognised. His scientific contributions and software derived from his research are relevant for solving multidisciplinary problems in civil, industrial, aerospace, marine, and naval engineering, among others.

Faiz Ahmad is a Professor of Materials Science at Universiti Teknologi PETRONAS, Malaysia. His multidisciplinary research includes Intumescent fire-retardant coating for fire safety, polymer composites, graphene reinforced metal composites for thermal management of smart electronics and energy storage, soft magnetic materials, and biomaterials for industrial application. He has completed 32 national, industry, and international projects, including Techno-fund from MOSTI, Government of Malaysia.

Guan Heng Yeoh is a Professor from the School of Mechanical and Manufacturing Engineering at the University of New South Wales. He received his B. Eng. in 1988 and Ph.D. in 1993 from the University of New South Wales. Currently, he is the Director of the Australian Research Council Training Centre for Fire Retardant Materials and Safety Technologies; an industry-focused fire research centre aimed to create fundamental knowledge on novel green and durable fire retardant materials, advanced fire models for the prediction of flame propagation in the urban and built environment, innovative fire suppression technologies, and new flammability tests for compliance with fire safety regulatory standards.

Hammad Aziz received his Ph.D. in Chemical Engineering from The University of Queensland and is currently working as a Continuous Process Improvement Engineer. Dr. Hammad's research focuses on Polymeric Fire-Retardant Coating and the Rheology of metallurgical coal.

Iqbal Rasool earned his BE (Aerospace), College of Aeronautical Engineering, Risalpur Pakistan, MS and Ph.D. (Solid Mechanics) Beijing University of Aeronautics & Astronautics, China. Research areas span over various Aerospace & Mechanical Engineering domains such as Aircraft Design, Finite Element Method, Mechanical Vibrations, Structure Design and Analysis, and Aerospace Materials.

Muhammad Rafi Raza received his Ph.D. from Universiti Teknologi PETRONAS (UTP) Malaysia in 2012. Currently, he is working as Assistant Professor at the Mechanical Engineering Department, COMSATS University Islamabad Sahiwal Campus. His interest is in advanced materials processing to develop micro and nano

structured materials, intumescent fire retardant coatings, composite materials, bio composites, corrosion of orthopedic stainless steel, and characterisation of micro and nanostructural.

Muhammad Yasir graduated with his Ph.D. in mechanical engineering from Universiti Teknologi PETRONAS, Malaysia, on intumescent fire-retardant coating and is now working in a public university in Pakistan.

Masdi Muhammad obtained his BSc in Mechanical Engineering and MSc in Manufacturing System Engineering from Lehigh University, USA. His Ph.D. in Mechanical Engineering was obtained from Universiti Teknologi PETRONAS, Malaysia. He is actively involved in research collaboration and consultancy with oil and gas companies with research interest in the area of Reliability, Maintenance, and Asset management.

Mokhtar I Chee, is the Head, Centre for Corrosion Research, Universiti Teknologi PETRONAS, Malaysia. His areas are materials, corrosion, inspection, metallic and non-metallic materials evaluation and selection, upstream and downstream corrosion study, advanced coating, non-destructive testing, and inspection.

Naveed Ramzan is a lecturer in the Chemical, Metallurgical, and Polymer Engineering, UET Lahore. He did B.Sc. and M.Sc. degrees in Chemical Engineering from the University of Engineering & Technology, Lahore. Later he received a Ph.D. in Chemical Engineering (2007) from TU Cottbus, Germany.

Nor Hafizah Ramli Sulong is an Associate Professor in Structural Engineering, Faculty of Engineering, School of Civil & Environmental Engineering, at University of Queensland Australia. She also has a Ph.D. in Civil Engineering (Imperial College, London).

Nur Atikah Ahmad Ridzuan completed her MS degree by researching intumescent fire retardant coating from Universiti Malaya, Malaysia.

Patrick J. Masset studied Materials Sciences and is graduated from the National Polytechnic Institute of Grenoble in France in 1998 and obtained his Ph.D. thesis in 2002. From 2012 to 2016, Professor Patrick

was the Head of Department at Fraunhofer in Germany, where he was in charge of coating, surface engineering, and powder materials technologies. Since 2020, he has been a Professor at the Koszalin University of Technology in Poland and develops new powder materials for additive manufacturing, surface engineering, catalysts.

Puteri Sri Melor Megat Yussof is an Associate Professor at the Mechanical Engineering Department, Universiti Teknologi PETRONAS (UTP), Perak, Malaysia. Her area of expertise and interest are in polymers, polymer composites, intumescent coatings, and education. She has had various research grants at both the national and international levels, including ERASMUS+.

Sami Ullah was born in Sialkot, Pakistan, in 1980. He received his Ph.D. from Universiti Teknologi PETRONAS Malaysia in 2012. Currently, he is serving as Associate Professor at the Department of Chemistry, King Khalid University, Abha, Saudi Arabia. His research interests are developing intumescent fire-retardant coatings, synthesis of Metal-Organic Frameworks (MOFs), and CO_2 capture from natural and flue gases.

Sarah Farukh graduated Ph.D. in chemistry and is currently an Assistant Professor at the National University of Sciences and Technology Islamabad, Pakistan.

Sarower Kabir completed his MS from Universiti Teknologi PETRONAS, Malaysia, and is presently working as a lecturer at Bangladesh university. Areas of interest include intumescent fire retardant coating.

Wan Farhana Mohamad completed her BE and MS from Universiti Teknologi PETRONAS, Malaysia and Ph.D. from UniMas Sarawak. Her research interests are intumescent coatings and powder metallurgy.

INDEKS

A

Air Pressurised Water (APW), 2
aluminium
    hydroxide, 22
    oxide, 27
    oxalate, 22
    tri hydroxide, 22
amine stabiliser, 25
ammonium
    pentaborate, 13, 14
    phosphate, 41
    polyphosphate, 14, 25, 27, 29, 41
APP-PER-MEL system, 85, 86

B

ball-milled BR, 79
bauxite residue (BR), 76
BLEVE (boiling liquid expanding vapour explosion), 3
boronphosphate, 13
boron nitride, 14

C

carbolite furnace, 45, 97, 103
carbolite muffle furnace, 77
carbon nanotubes, 25, 26, 27
char
    carbon, 16
    carbonaceous, 15, 17, 41
    composition, 43
    expansion, 43, 85
    forming agent, 42, 73
    homogenous, 28
    insulation layer, 101
    morphology, 31, 43
    multi-cellular, 14, 28, 31
    reinforcement, 74

residual, 30
solid, 9
uniform, 28
weight, 85
chlorinated paraffin, 41
cohesion, 33
cone calorimetry test, 89

D

decomposition, 29, 32, 33
derivative of thermogravimetric analysis (DTGA), 61
digital vernier calliper, 43, 77, 93, 97
dry chemical, 3

E

EG-APP-MEL mixture (F3), 78
EG-APP systems, 79
EG-based silicone-epoxy hybrid intumescent system, 76
epoxy binder (BPA), 97
esterification, 17
reaction, 79
ethylene-vinyl acetate (EVA), 90
expandable graphite, 75

F

ferric oxide, 30
fire, 1
cellulosic, 2
chemical, 3
electric, 3
hydrocarbon, 2
flame retardants (FR), 6, 8
halogen based, 10
brominated, 10
inorganic based, 12
nitrogen and boron containing, 13
nitrogen based, 12
phosphorous based, 11
red phosphorous, 12

fuel, 2
fumed silica, 90
FTIR spectrum, 55, 97, 152

G

glass flake, 31
graphene, 25
graphite
    basal planes, 104
    crystal structure, 103
    flakes, 78, 79
    lattices, 104
    worms, 76

H

halloysite-based IFRC, 27
halloysite nanotube (HNT), 25
hardener (TETA), 97
heat-resistant, 27
hydromagnesite, 23, 28
hydrotalcite, 23
hydroxyl silicone oil (HSO), 20

I

inert, 27, 33
insulative barrier, 42
iron phosphate, 30, 31

K

K-type thermocouples, 150

M

magnesium
    carbonate, 23, 27
    hydroxide, 22, 27
    oxide, 23, 27

phosphate, 28
melamine, 12, 18
diborate, 14
polymetaphosphate, 41
polyphosphate, 41
pyrophosphate, 41
molybdenum disilicide, 30
mono-component epoxy resin (RTM6), 89
montmorillonite, 26
multi-component nanocomposite, 88
multi-wall carbon nanotubes (MWCNTs), 26
multicellular closed cell formation, 141

N

nano-LDH, 26
nano-silica, 25, 26
nanoparticles, 26, 33
nanoscale Si-O-Si network, 89

O

organic-modi ied montmorillonite (OMMT), 25

P

passive ire protection (PFP), 186
peak heat release rate (PHRR), 89
pentaerythritol (PER), 17, 29, 32, 41
PER-APP-BR system, 80
perlite, 75
polyhydric, 41
polymers
polyamides, 22
polyethylene, 25
polypropylene (PP), 22
polyurethane, 41
polyole in, 22
PP/APP/PA-6 system, 86
protonation, 177
Pyris Player Data Analyser, 45

Pyrolysis Gas Chromatography-Mass Spectrometry (Pyrolysis GC-MS), 152

Q

Q-Sun Xenon Test Chambers, 265

S

scanning electron microscope (SEM), 189
SEM micrograph, 103
